Introduction

The 4-port synchronous (sync) serial network module (NM-4T) has four DB-60 ports and provides a data rate of 8 Mbps on port 0, 4 Mbps each on port 0 and port 2, or 2 Mbps on all four ports simultaneously. The NM-4T network module only supports sync mode. The DB-60 ports on the NM-4T network module support the Cisco 60-pin "5-in-1" cables used on the Cisco 2500 and Cisco 7000 series routers.

Product Number

NM-4T - Four Port Sync Serial Network Module

Features

- Four serial ports.
- Uses Cisco DB-60 connectors (same cabling as Cisco 2500, Cisco 7000, NM-4A/S, and NM-8A/S). For more information, refer to 60-pin "5-in-1"
- Supports sync mode only (async mode is not supported).
- Provides synchronous data rate of 8 Mbps on port 0, 4 Mbps each on port 0 and port 2, or 2 Mbps on all four ports simultaneously.
- Does not support bisync or half-duplex.

Platform Support

Cisco IOS® Software Support	Cisco 2600, 2600XM	Cisco 3620 and 3640	Cisco 3631	Cisco 3660	Cisco 2691, 3725, 3745
NM-4T	Not supported	Cisco IOS Versions 11.2(4)XA, 11.2P, all 11.3, and all 12.x	Not supported	All Cisco IOS versions	Not supported

Configuration

On the NM-4T network module, the interfaces are addressed as **interface serial <slot>/<unit>**. The units are numbered from right to left. Below is a sample configuration for the NM-4T network module. The NM-4T should be configured just as you would any other serial interface on a 2500, 7500 etc.

Note: There are no **framing**, **clocking**, or **linecode** parameters or commands being used here. The NM–4T network module does not have an integrated CSU/DSU. You need to use an external CSU/DSU.

```
maui-soho-02(config)#interface Serial 2/0
maui-soho-02(config-if)#ip add 10.0.0.1 255.255.255.0
maui-soho-02(config-if)#encapsulation ppp
maui-soho-02(config-if)#no shutdown
```

For more information on configuring the NM-4T network module, refer to Configuring Serial Interfaces.

Tools Information
